SURVIVING AN OVERDOSE: NEXT STEPS ON THE ROAD TO RECOVERY

**Prevent
Overdose,
Save
Lives**

The Delaware County Certified Recovery Specialist (CRS) program's mission is to have trained specialists engage with overdose survivors and connect those individuals with treatment options. *The goal is to save lives and end the cycle of addiction.*

Seeking Treatment

If you or someone you love has experienced a drug overdose, now is the time to access treatment. If you are a Delaware County resident who has Medical Assistance or are uninsured, you may contact one of these three providers to obtain an assessment for D&A treatment.

Please note that while all efforts should be made to obtain proof of residency, the absence of proof will not prohibit an individual from receiving a Drug & Alcohol assessment or admission into a level of care.

Keystone Center

2001 Providence Avenue
Chester PA 19013
610-876-9000
800-558-9600

and Saturday 9 am-12 pm

If you have commercial insurance (private insurance), call the phone number on the back of your insurance card for a list of providers.

Delaware County Certified Recovery Specialist Program

If you or your loved one has experienced an opiate overdose, contact a Certified Recovery Specialist (CRS) who can assist you in the treatment process.

The services of a CRS are free and provided through a partnership of Crozer-Keystone Health System and the Delaware County Office of Behavioral Health, Division of Drug & Alcohol.

A Certified Recovery Specialist is trained and well-versed in the Drug & Alcohol system and can assist individuals with applying for insurance, setting up appointments, and navigating detox and treatment options.

CRS services are completely voluntary. To speak with a Certified Recovery Specialist, call:

610-619-8616

Surviving an overdose: Next steps

- A drug overdose is a traumatic, life-changing experience for individuals and their families. Administration of the overdose-reversing drug Naloxone (Narcan) is saving lives.
- Do not assume that an overdose episode has ended if symptoms improve. Narcan stays active for about 30-90 minutes in the body.
- Individuals must get emergency medical attention after being given a Narcan treatment dose.
- The Narcan may wear off before the opiates wear off and the individual could go into overdose mode again. Repeated doses may be necessary if a person is still showing signs of an overdose.
- Everyone who experiences an overdose needs to be taken to the closest hospital emergency room and should be seen by his or her doctor for follow-up.
- In order to end the cycle of addiction and prevent death, Drug & Alcohol Treatment is strongly recommended. Call a Certified Recovery Specialist to discuss recovery options.
